DEFINITION **Close Contact:** The CDC defines close contact as anyone who was within 6 feet of an infected person for at least 15 minutes starting two days before the onset of symptoms until the time the patient is isolated. Other examples include direct physical contact (i.e. kissing, hugging, etc.), sharing a drinking glass or eating utensils, and contact with respiratory secretions (e.g. someone coughs or sneezes on you or close to you). Close contact with someone with COVID-19 makes you at higher risk for getting sick or spreading COVID-19.
